STEEL REINFORCED INJECTION MOLDED PP GRATING

What is CORR-RES GRATE?

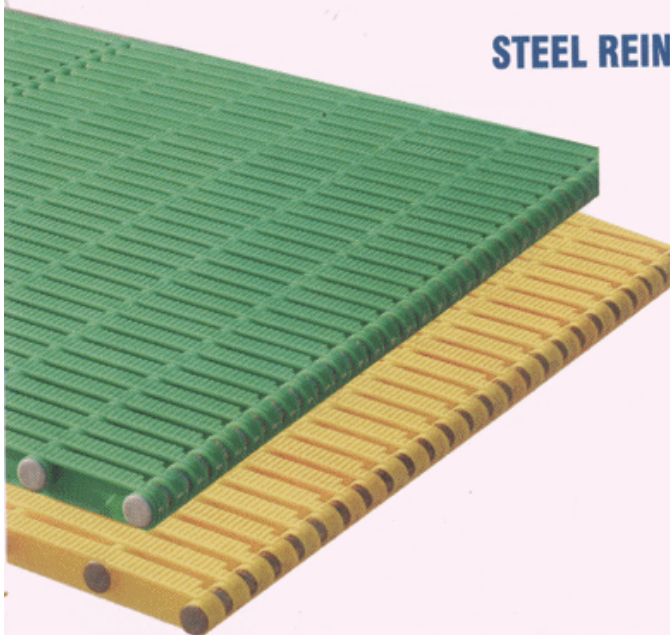

CORR-RES GRATE steel reinforced injection molded PP grating is a strong mesh grating panel supported by specialized steel bars. The CORR-RES grating offers 100% resistance to corrosion & chemical attack. The support steel bars are totally insulated from corrosion by providing PP cover.

CORR-RES GRATE is significantly lighter in weight than metallic gratings and provides long, virtually maintenance-free performance. A higher safety factor is achieved by providing steel bars. Bidirectional Load Bearing capacity of CORR-RES GRATE is 1000 kg/m².

CORR-RES GRATE has many advantages as the panels are expandable to any shape and size. The panels feature a concave non-slip walking surface.

Advantages:

- Corrosion Resistant
- Low in Maintenance
- Lightweight
- Easy to Install
- Uniform in Appearance
- Skid Resistance Surface
- Easy to Assemble
- Impact Resistant
- Low in Conductivity
- Bidirectional Load Bearing
- Cost Effective
- Fire retardant material available on request
